

Elijah Parfitt

Business Intelligence Developer & Freelance Data Consultant

elijah@databyelijah.com | databyelijah.com | linkedin.com/in/databyelijah | github.com/eparfitt1002

PROFESSIONAL SUMMARY

Business Intelligence Developer with 5+ years of experience building enterprise Power BI reporting and automated data pipelines. Combines dashboard and DAX expertise with hands-on SQL, Python, and cloud data engineering (Databricks, Microsoft Fabric) to turn large, messy datasets into decision-ready analytics. Proven track record of measurable business impact — six-figure cost savings, 80% faster reporting, and data models spanning millions of rows. Seeking freelance and contract engagements in data analysis, dashboard development, and light data engineering.

\$650K+

Annual Savings Delivered

\$100K+

Return Mitigation

80%

Faster Reporting

CORE SKILLS

BI & Visualization	Power BI, DAX, Power Query, Tableau, Executive KPI Reporting, Data Modeling (Star Schema)
Data Engineering & Cloud	Azure Databricks, Microsoft Fabric, Apache Spark, ETL/ELT Pipeline Design, Google Cloud Run, Cloud Scheduler, Cloud Storage, PostgreSQL
Languages & Automation	SQL, Python, Power Automate, Workflow Automation, API Integration
Applied AI	Gemini API / LLM Integration, Prompt Engineering, Computer Vision & Image Processing
Platforms & Tools	Excel, Salesforce, Streamlit, Docker, Flask, Google Sheets API

PROFESSIONAL EXPERIENCE

Business Intelligence Developer — Gap Inc.

May 2021 – Present | Hybrid, United States

- Deliver high-volume data insights and reporting on customer experience for contact center leadership, translating complex, messy datasets into actionable business recommendations.
- Design and build Power BI dashboards and reports using DAX, Power Query, and star-schema data modeling, engineered to run efficiently across multi-million-row datasets.
- Write and optimize complex SQL queries across Azure Databricks and Microsoft Fabric environments to support enterprise-scale reporting and analytics.
- Automate recurring reporting workflows with Power Automate and Python, reducing manual effort and improving data reliability.
- Partner cross-functionally with Client Experience leadership to identify KPIs, analyze trends, and deliver strategic, data-driven recommendations that improved customer service operations.

SELECTED PROJECTS

CFPB Consumer Complaint Analysis — *Databricks, Power BI*

Automated Databricks-to-Power BI pipeline analyzing 8.3M+ consumer complaint records, with scheduled API-based ingestion, root-cause decomposition analysis, and geospatial mapping of company response times.

Contact Center SLA Performance Dashboard — *Python, Power BI*

Hand-built Python ELT pipeline and Power BI dashboard processing 52,000+ calls end-to-end with no managed cloud platform. Identified the drivers behind 92% SLA compliance, informing \$650K+ in annual workflow savings.

RarezWarez AI Inventory Pipeline — *GCP, Gemini AI, Databricks*

Serverless GCP pipeline (Cloud Run, Cloud Scheduler, Cloud Storage) using Gemini AI computer vision to auto-generate structured e-commerce listings from raw product photos, feeding a Databricks warehouse and Power BI reporting layer.
